

**COMPUTERIZED SYSTEM AND METHOD FOR CONVERTING
SELECTED TEXT BETWEEN LANGUAGES**

Abstract of the Invention

The present invention provides a web-based/computerized system and
5 method for converting selected text between languages. Specifically, under the
present invention, a user can designate a source language and a destination
language using a computerized device (e.g., personal computer, handheld device,
etc.). Once designated, an updatable language dictionary corresponding to the
designated languages will be accessed (e.g., downloaded or referenced) at a
10 remote source and used to convert selected text between the languages.
